Professional Summary

Results-driven **Associate Technical Lead** with over 3½ years of experience in full-stack development and cloud architecture. Proven track record in building scalable applications using modern technologies such as AWS cloud services, Node.js, Java, and Angular. Experienced in designing event-driven architectures and real-time systems using Kafka, WebSockets, and distributed pipelines handling 800+ TPS. Skilled in leading Agile teams of 5+ engineers, implementing CI/CD pipelines, and driving engineering excellence through mentorship and best practices. Strong background in microservices architecture, RESTful API development, and DevSecOps practices.

Work Experience

Associate Technical Lead / Senior Software Engineer

June 2024 – Present

Fortude, Colombo 008

- Lead a team of 5+ engineers in developing and maintaining scalable cloud-based applications on AWS.
- Spearheaded a serverless transformation initiative, improving application performance by 40% and reducing operational costs by 35%.
- Architected an IoT data processing pipeline using AWS Step Functions, Kafka, Redis, and Lambda, enabling high-throughput processing of approximately 800 TPS.
- Optimized data storage strategy by implementing S3-based time-series storage, reducing database costs by 60% while maintaining performance.
- Designed and developed real-time communication systems using WebSockets for seamless front-end to back-end interaction, supporting over 1000 concurrent users.
- Developed Infrastructure as Code for serverless provisioning using GitHub Actions workflows and AWS OIDC for secure, automated deployments.
- Implemented CI/CD pipelines with Jest-based automated testing, reducing deployment time by 50% and ensuring zero-downtime releases.
- Mentored junior developers, conducted code reviews, and led Agile ceremonies.
- Conducted technical interviews for software engineer and intern positions.

Software Engineer / Associate Software Engineer

January 2022 – June 2024

Virtusa, Colombo 009

- Designed and developed microservices using Java, TypeScript, and Node.js.
- Built backend systems using Node.js and AWS Lambda with API Gateway integrations.
- Developed reusable Angular components for dynamic front-end interfaces.
- Implemented authentication and caching mechanisms using AWS Cognito and Redis.
- Collaborated with cross-functional teams to optimize system performance and scalability.
- Participated in Agile sprints, code reviews, and mentorship initiatives.

Education

Master of Science in Software Engineering

University of Staffordshire

August 2025 – Present

Currently Pursuing

Bachelor of Engineering in Software Engineering

IIC University, Cambodia

November 2023

Certifications

- AWS Certified Developer Associate – Dec 2022
- Oracle Cloud Infrastructure Associate – Aug 2023
- Oracle Certified Associate (OCA) Java – Sep 2023

Technical Skills

Languages & Frameworks: Node.js, Java, TypeScript, JavaScript, Express, NestJS, Angular, React

Cloud & Infrastructure: AWS (Lambda, API Gateway, DynamoDB, S3, CloudWatch, Cognito), Oracle Cloud

Databases & Caching: MySQL, DynamoDB, DocumentDB, Redis

Messaging & Streaming: Apache Kafka, WebSockets, Event-driven Architecture

DevOps & Tools: Git, GitHub Actions, Jenkins, AWS CodePipeline, Docker, Jest, Postman

Architecture & Design: Microservices, RESTful APIs, Cloud-native Patterns, CI/CD

Key Achievements

- Led cloud transformation initiative improving performance by 40% and reducing operational costs by 35%.
- Established CI/CD pipelines with automated testing, reducing deployment time by 50%.
- Architected IoT data pipeline handling 800+ TPS using event-driven architecture.
- Mentored and upskilled 15+ engineers, enhancing team productivity and code quality.
- Conducted over 20 technical interviews for software engineering roles.

Professional Skills

Team Leadership, Technical Mentorship, Cross-functional Collaboration, Problem Solving, Agile Methodologies, Code Review, Technical Documentation, Stakeholder Communication
